DEFENSE IS COMMITTED FOR SUSTAINABILITY

The Ministry of Defence, through its mission of intervention and protection to ensure citizen safety, territorial integrity, and French interests in the world, is at the heart of social issues in France and as such carries special responsibilities:

- a key social role for the security of citizens and territories, through the integration, promotion, equal opportunities, dissemination of civic values;
- a considerable economic force which contributes to the competitiveness and sustainability of French industry and promotes dynamism and innovation;
- a leading environmental responsibility, through eco-designing defence equipment, ensuring energy efficiency and infrastructure, and embracing the preservation and protection of ecosystems, both at home and in other theatres where French forces could be involved.

To keep elaborating an ambitious and responsible contribution to public policy, the Defence has been bringing renewed impetus to the work already undertaken, through the Ministerial declaration of the national ecological transition strategy towards sustainability.

Myriam Achari
Senior official for sustainability
L'Eco-Camp 2025 est une réponse optimisée et adaptée aux besoins des forces tout en limitant au maximum l’impact sur l’environnement.

Impacts probables des changements climatiques / Likely impacts of climate change
au XXIème siècle / in the 21st century

Légende / Key:
- Risque accru d’incendie: Increased risk of fire
- Permafrost en 2050: Permafrost loss by 2050
- Fonte des glaciers: Melting of glaciers
- Zones en voie de désertification: Desertifying areas
- Dégénération des ressources halieutiques: Degradation of fisheries resources
- Biodiversité menacée: Threatened biodiversity
- Activité cyclonique accrue: Increased cyclonic activity
- Hausse des précipitations: Increasing rainfall
- Baisse des précipitations: Decreasing rainfall
- Montée du niveau de la mer: Rise of sea level

Main areas impacted:
- Principales zones concernées
- Principales villes touchées
- Zone de delta très affectée

Main areas affected:
- Delta area very affected
Understand nature to anticipate climate-change-related hazards
